Art Unit: 1636

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a method of making a complex for delivery (of a compound) to a cell, classified in class 435, subclass 91.1+.
- II. Claim 6, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is an orthogonal protecting group or a hydrogen, and R' is an orthogonal protecting group, a hydrogen, a reporter molecule or a targeting group, classified in class 423, subclass 364.
- III. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a vinyl group, classified in class 423, subclass 364.
- IV. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is an acrylate group, classified in class 423, subclass 364.
- V. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a methacrylate group, classified in class 423, subclass 364.
- VI. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a acrylamide group, classified in class 423, subclass 364.
- VII. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a methacrylamide group, classified in class 423, subclass 364.

Art Unit: 1636

- VIII. Claim 7, drawn to a monomer comprising at least the recited tertiary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a targeting group, classified in class 423, subclass 364.
- IX. Claim 8, drawn to a monomer comprising at least the recited secondary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a vinyl group, classified in class 423, subclass 364.
- X. Claim 8, drawn to a monomer comprising at least the recited secondary amine core structure, wherein R is a protecting group or a hydrogen, and R' is an acrylate group, classified in class 423, subclass 364.
- XI. Claim 8, drawn to a monomer comprising at least the recited secondary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a methacrylate group, classified in class 423, subclass 364.
- XII. Claim 8, drawn to a monomer comprising at least the recited secondary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a acrylamide group, classified in class 423, subclass 364.
- XIII. Claim 8, drawn to a monomer comprising at least the recited secondary amine core structure, wherein R is a protecting group or a hydrogen, and R' is a methacrylamide group, classified in class 423, subclass 364.
- XIV. Claims 9 and 10, drawn to a polymer comprising a nucleic acid-binding monomer, two linkers which are aliphatic, cycloaliphatic or aromatic, and one or two bonds from the recited list, classified in class 424, subclass 450.

Art Unit: 1636

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group XIV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method may be used to make other polymers, and the polymers may be made by another method, e.g., a method wherein the polyion is absent during polymerization.

Inventions of Groups II-XIII and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the monomers may be used to make a different polymer, e.g., one with different linkers and chemical bonds between said linkers, and the process of making may be used to polymerize different monomers.

Inventions of Group XIV and Groups II-XIII are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the recited monomer in the polymer is more broadly drawn than the monomer claims, and because the polymer recites another component which could confer patentability over the monomers, i.e., the linker components or

Art Unit: 1636

the recited chemical bond between said linker components. The subcombination has separate utility such as polymerization into a patentably distinct polymer excluded by the polymer claims of Group XIV, e.g., a co-polymer, or as a linker molecule itself to attach a molecule to a surface or support.

Inventions of Groups II-XIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different linkages by virtue of their mutually exclusive R or R' groups, and thus would represent mutually exclusive inventions. Furthermore, the different R or R' groups would have potentially different biological properties.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search of required for Groups II-XIII are mutually exclusive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

control control runnour. 10,000,

Art Unit: 1636

Certain papers related to this application may be submitted directly to the Examiner by facsimile transmission at (703) 746-5155. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993)(see 37 CFR ' 1.6(d)). To send the facsimile to the Art Unit instead, the Art Unit 1636 Fax number is (703) 305-7939. NOTE: If Applicant does submit a paper by fax to this number, the Examiner must be notified promptly, to ensure matching of the faxed paper to the application file, and the original signed copy should be retained by Applicant or Applicant's representative. (703) 308-4242 or (703) 305-3014 may be used without notification of the Examiner, with such faxed papers being handled in the manner of mailed responses. Applicant is encouraged to use the latter two fax numbers unless immediate action by the Examiner is required, e.g., during discussions of claim language for allowable subject matter. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.

Any inquiry concerning this communication or earlier communications from the Examiner with respect to the examination on the merits should be directed to James Ketter whose telephone number is (703) 308-1169. The Examiner normally can be reached on M-F (9:00-6:30), with alternate Fridays off.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Remy Yucel, can be reached at (703) 305-1998.
